IMPLEMENTED BY

DGGS ?

“A Discrete Global Grid System is a spatial reference system that uses a hierarchical tessellation of cells to partition and address the globe.”

OGC Abstract Specification, 2017

Healpix

DestinE Climate Data (HealPIX)!!

Xarray

N-D labeled arrays and datasets in Python

Xarray is an open source project and Python package that introduces labels in the form of dimensions, coordinates, and attributes on top of raw NumPy-like arrays, which allows for more intuitive, more concise, and less error-prone user experience.

Xarray includes a large and growing library of domain-agnostic functions for advanced analytics and visualization with these data structures.

XDGGS

Xarray + DGGS

Result of our BIDS23 pangeo-osgeo sprint session

Kmoch, A., Bovy, B., Magin, J., Abernathey, R., Coca-Castro, A., Strobl, P., Fouilloux, A., Loos, D., Uemaa, E., Chan, W. T., Delouis, J.-M., and Odaka, T.: XDGGS: A community-developed Xarray package to support planetary DGGS data cube computations, *Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci.*, XLVIII-4/W12-2024, 75–80, <https://doi.org/10.5194/isprs-archives-XLVIII-4-W12-2024-75-20>

The screenshot shows a JupyterLab interface with a browser window at the top displaying the URL `gfts.minrk.net/user/tinaok/lab/workspaces/auto-k/tree/xdggs_examples/visualisation/xdggs-ex...`. The main workspace contains a code editor with the following Python code:

```
cell_ids=('value', np.arange(12*4**10 ),
          {"grid_name": "healpix", "level": 10, "indexing_scheme": "nested"})
```

Below the code editor, the output of the cell is displayed:

```
[5]: ds = xr.open_dataset(
      # "https://data-taos.ifremer.fr/DestinE/average_surface_temperature.zarr",
      "DestinE/average_surface_temperature.zarr",
      engine="zarr",
      chunks={},
      consolidated=True,
    )
ds
```

The output shows a `xarray.Dataset` with the following dimensions and coordinates:

```
[5]: xarray.Dataset
    > Dimensions:      (oceanModelLayer: 75, cells: 12582912)
    > Coordinates:
      cell_ids      (cells)          int64  dask.array<chunksize=(100000...
      latitude      (cells)          float64 dask.array<chunksize=(100000...
      longitude      (cells)          float64 dask.array<chunksize=(100000...
      oceanModelLa... (oceanModelLayer) float64  1.0 2.0 3.0 4.0 ... 73.0 74.0 75.0
```

The bottom status bar indicates the environment is `Python 3 (ipyk...)` and shows memory usage: `Mem: 4.19 / ...`.
